

Service Level Agreement (SLA)

1. Overview

A simple **Service Level Agreement (SLA)** should be configured for the **Movie Ticket Request** case type to ensure that booking requests are processed within the expected time limits.

The SLA should define a **Goal** of **1 day** and a **Deadline** of **2 days** from the time the case is created.

2. SLA Configuration

The following SLA settings should be configured:

SLA Setting	Value	Purpose
Goal	1 day	Target time for processing the booking request.
Deadline	2 days	Maximum expected time for completing the case.
Goal Urgency	Increase/flag urgency	Indicates that the case is approaching its deadline when the goal is missed.
Deadline Urgency	Increase case priority	Automatically increases the case priority when the deadline is missed.

3. Goal

The **Goal** is set to **1 day from case creation**.

If the case has not reached the required progress within one day, the system should indicate that the SLA goal has been missed. The case should be **flagged as approaching the deadline**, allowing the responsible user to take appropriate action.

Goal: 1 Day

Case Created → 1 Day → Goal Missed → Case Flagged

4. Deadline

The **Deadline** is set to **2 days from case creation**.

If the case remains incomplete after two days, the system should automatically increase the **case priority** using the configured urgency setting.

Deadline: 2 Days

Case Created → 2 Days → Deadline Missed → Priority Increased

5. No Complex Escalation Required

The SLA configuration does not require complex escalation paths, additional approval flows, or multiple escalation levels.

Only the following settings are required:

- **Goal = 1 day**
- **Deadline = 2 days**
- Configure appropriate **urgency increase** when the goal is missed.
- Configure a higher **urgency/priority** when the deadline is missed.

6. Expected Outcome

The SLA helps ensure that **Movie Ticket Request** cases are processed within the expected timeframe.

The configured SLA provides a simple mechanism to identify delayed cases and automatically increase their priority when the final deadline is exceeded.

SLA Flow

Case Created → Goal (1 Day) → Goal Missed → Flag/Increase Urgency → Deadline (2 Days) → Deadline Missed → Increase Case Priority
