

Booking Completion Correspondence

1. Overview

A **Correspondence** mechanism should be configured to notify the **Customer** persona after the movie ticket booking has been successfully completed.

The notification should be triggered when the **Movie Ticket Request** case is successfully resolved. This provides the customer with a confirmation of the completed booking and all important ticket details.

2. Correspondence Rule

A **Correspondence** rule should be created to generate and send the booking completion notification automatically.

The correspondence should be configured to trigger when the case reaches the **Resolved** status after successful booking execution.

Trigger

Booking Successfully Completed → Case Resolved → Correspondence Sent to Customer

3. Notification Details

The notification should contain the following booking information:

Field	Description
Case ID	Unique identifier of the Movie Ticket Request case.
Movie Name	Name of the movie booked by the customer.
Show Date and Time	Date and timing of the selected movie show.
Seat Numbers	Seats allocated to the customer.
Total Cost	Final cost of the booked tickets.

4. Sample Notification

Subject: Movie Ticket Booking Confirmation

Dear Customer,

Your movie ticket booking has been successfully completed.

Booking Details:

- **Case ID:** MT-000125
- **Movie Name:** Example Movie
- **Show Date:** 30-Aug-2026
- **Show Time:** 7:00 PM
- **Seat Numbers:** A10, A11
- **Total Cost:** ₹400
- **Booking Status:** Confirmed

Thank you for using our Movie Ticket Booking System.

5. Expected Outcome

When the booking is successfully completed and the case is resolved, the system automatically sends the correspondence to the **Customer** persona.

This ensures that the customer receives a complete record of the booking for future reference and tracking.

Correspondence Flow

Booking Execution → Booking Completed → Case Resolved → Correspondence Rule Triggered → Customer Notified
