

Booking Execution – Work Queue Routing

1. Overview

Within the **Booking Execution** stage, the **Movie Ticket Request** case should be automatically routed to the appropriate work queue based on the value of the **Show Type** property.

Two work queues should be configured:

- **PremiumShowQueue** – For premium or special screenings.
- **StandardShowQueue** – For all other movie shows.

The routing should occur automatically without requiring manual intervention.

2. Show Type Property

A **Show Type** property should be used to determine the appropriate work queue.

Possible values include:

- **Premium** – Premium, special, or exclusive screenings.
- **Standard** – Regular movie screenings.

3. Routing Logic

The following routing logic should be configured:

Show Type	Work Queue
Premium	PremiumShowQueue
Standard	StandardShowQueue
Any other value	StandardShowQueue

Routing Flow

Show Type → Evaluate Condition → Select Work Queue → Assign Case

4. Using a When Rule

A **When rule** can be used to evaluate the Show Type and determine the appropriate routing.

Example logic:

If Show Type = Premium → PremiumShowQueue

Else → StandardShowQueue

This ensures that premium bookings are handled by the specialized queue while all other bookings are routed to the standard queue.

5. Using a Decision Table

Alternatively, a **Decision Table** can be configured to manage the routing logic.

Condition: Show Type	Result: Work Queue
Premium	PremiumShowQueue
Standard	StandardShowQueue
Otherwise	StandardShowQueue

A Decision Table provides a structured approach and can be easily extended if additional show types or queues are introduced later.

6. Automatic Routing

The routing should execute automatically when the case reaches the **Booking Execution** stage.

No manual selection of the work queue should be required from the customer, booking agent, or other user.

Process:

Booking Execution → Read Show Type → Apply When Rule/Decision Table → Route Case → Appropriate Work Queue

7. Expected Outcome

The **Movie Ticket Request** case is automatically assigned to the correct work queue based on the selected **Show Type**.

- Premium or special screenings → **PremiumShowQueue**
- All other screenings → **StandardShowQueue**

This improves work distribution, reduces manual effort, and ensures that premium bookings receive the appropriate processing.
